Projects

AthletiQ | *React Native, Expo, TypeScript, Supabase, Claude API* Nov 2025 – Present

- Building a cross-platform mobile app that turns a student-athlete's program and sport into a personalized weekly training and study schedule generated by the Claude API
- Implemented email/password auth with deep-link confirmation and post-auth routing that sends new users to onboarding and returning users to their dashboard
- Built a 4-step onboarding flow with on-device draft saving (AsyncStorage) and a final upsert to Supabase
- Designed a 4-table PostgreSQL schema (profiles, schedules, performance logs, onboarding) secured with row-level security policies

Mine Escape Pathfinder | *Java* Feb 2026

- Built a grid pathfinding algorithm that parses map files and finds a valid escape route through a mine, verified across multiple maps
- Modelled the map, cells, and player as Java classes, using arrays and file I/O to load and update game state
